

**Veera Naga Koushik Chaladi**

**Role:** Applications Engineer

**Contact Number:** +91 9110753275, **Email:** vnkoushik.ch@gmail.com

---

Experienced **Pega System Architect** proficient in developing enterprise-grade applications leveraging **Process Flows, Activities, File Listeners, Background Processing, and REST API integrations** (Connect REST, Service REST). Skilled in building intuitive UIs using **Harnesses, Layouts, and Sections**, with expertise in debugging tools like **Clipboard, PAL, PDC, and Tracer**. Passionate learner with hands-on personal projects involving **Python, OpenAI API integrations, TensorFlow, PyTorch, Transformer architectures, RAG implementations, Hugging Face, and spaCy**. Certified **TensorFlow Developer** actively expanding skills in **machine learning** and **NLP** through proof-of-concept projects. Additionally, knowledgeable in **Autopilot code** and its application in intelligent automation workflows.

## Professional Experience:

---

### Pegasystems

*Applications Engineer*

**Project: Smart dispute agentic automation**

*Dec 2024 to Present*

- **Pega Constellation UI & Case Flows** – Developed dynamic case management flows and UI logic using Pega’s latest Constellation framework. Focused on enhancing user experience and process control.
- **Third-Party Integration** – Designed and implemented seamless integration with **Ethoca** for dispute management. Enabled real-time third-party communication.
- **Flow Actions & Lifecycle Automation** – Emphasized clean case transitions and flow actions to automate decision paths. Improved process visibility and traceability.
- **Mentorship & Team Collaboration** – Guided junior developers on Pega best practices and reviewed deliverables. Fostered a collaborative and agile development environment.
- **Design & Architecture** – Participated in technical discussions and peer reviews. Suggested improvements in epic design.

*Associate Applications Engineer*

**Project: Smart claims engine**

*Aug 2021 to Dec 2024*

- **Pega Case Management & Background Processing** – Expertise in case types, service REST, file listeners, collection rules, report definitions, and product rules for streamlined workflow automation.
- **Advanced Reporting & Search Optimization** – Developed virtual report definitions for Elastic Search, Pega Search, and Reporting Service, implemented near real-time indexer using Indexer API, and optimized advanced paging functionality.
- **Declarative & Data Processing** – Hands-on experience with declarative rules, activities, data transforms, joins, associations, sub-reports, and XML parsing to enhance automation and data integrity.
- **Pega AI & Integration** – Integrated Pega Gen AI functionality, leveraged Pega Explore Data, and executed Service REST API implementations for seamless data processing and retrieval.
- **POC Development** – Contributed to design discussions, EPICs POCs, and enhanced system extensibility

## Python personal projects and POC

---

### Project: Ask Your Documents

- **LangChain & Hugging Face Integration** – Built a document-based Q&A assistant using LangChain and Hugging Face models. Enabled intelligent document understanding and interaction.
- **Embedding & Chunking Techniques** – Used Hugging Face for embeddings and COLBERT for chunking. Enhanced semantic relevance and retrieval efficiency.
- **Vector DB Implementation** – Implemented PostgreSQL to act as a vector store. Supported scalable and indexed embedding queries.
- **API Development** – Deployed solution using FastAPI. Ensured a responsive and accessible interface for end-users.
- **Contextual Retrieval Pipeline** – Designed an end-to-end context-aware document response system. Focused on accurate and real-time answer generation.

### Project: E-Commerce Clothing Classifier

- **Deep Learning Model with PyTorch** – Developed a clothing image classifier using PyTorch. Built for fashion e-commerce applications.
- **TorchVision & TorchMetrics** – Utilized TorchVision for data augmentation and TorchMetrics for evaluation. Ensured thorough model tracking.
- **Hyperparameter Tuning** – Performed iterative tuning to enhance model accuracy. Achieved optimized training results.
- **Training Pipeline Design** – Created a modular and scalable training workflow. Improved reproducibility and deployment readiness.
- **Model Evaluation & Reporting** – Focused on structured performance validation. Ensured production-grade readiness.

## Skills

---

**Programming/Scripting Languages:** Python

**Machine Learning:** PyTorch, Tensorflow, Scikit-Learn

**AI & NLP expertise:** LLMs, Transformers, Hugging face, LangChain, Spacy, OpenAI API

**Tools:** PegaPRPC

**Others:** GIT, GenAI, Prompt Engineering

**Soft Skills:** Team Player, Resilient, Problem Solving, Inter-Personal Communication.

## Education

---

**Velagapudi Ramakrishna Siddhartha Engineering College (VRSEC)**

*Bachelor of Technology – Information Technology; (GPA – 8.45)*

*May 2017 to Jun 2021*

## Certifications

---

Google tensorflow developer certification

May 2023 – No expiry

Pega certified senior system architect

Mar 2021 – No expiry

Python for everybody

Mar 2021 – No expiry

## Awards and Recognitions

---

- 2-time spot award winner.
- Winner of pega **4x4 award** which is awarded globally in each quarter
- Published Journals in Indexed, Scopus, and Free journal for springer.
