

ABHISHEK V KULKARNI

✉ abhishekvkulkarni876@gmail.com | ☎ +917975118960 | 📍 Bengaluru

Career Objective

As a dedicated and enthusiastic Artificial Intelligence and Computer Science Engineering student with a passion for data analytics and software development, my objective is to secure an opportunity that allows me to demonstrate and refine my skills while contributing to the company's growth. I aim to join a team of motivated individuals committed to achieving the company's goals and success.

Experience

EY	Banglore
Senior Analyst(AI/ML Engineer)	Mar 2026 - Present
Working on creating RAG Agentic Applications.	
Lexicon Infotech Limited	Hyderabad
Software Executive Trainee	Nov 2025 - Mar 2026
Training on SQL and backend	
Working on RAG applications	
https://lexiconinfotech.com/	
Supernest ai	Bengaluru
Software Developer Intern	Dec 2024 - Mar 2025

Education

Amrita Vishwa Vidyapeetham, Bengaluru	7.36
BTech in Computer Science and Artificial Intelligence	Sep 2021 - Aug 2025
Sri Chaitanya Education Institution, Bengaluru	97%
Higher Secondary School	May 2019 - Jul 2021

Skills

Programming Languages	Artificial Intelligence
Python, MATLAB, SQL	Machine Learning (Supervised, Unsupervised, Reinforcement) Deep Learning (CNN, LSTM, RNN)
	Classification, Regression, NLP, LLM, Transformers, Clustering, Association
Frameworks	Data Analytics and Visualization
TensorFlow, OpenCV, Keras	Numpy, Pandas, PowerBI
Soft Skills	Technical Skills
Decision Making, Leadership Skills, Problem-solving, Adaptability, Team Work	OOPS, DSA

Publications

Cross-Language Compiler Construction from Matlab to Python
IEEE Xplorer
Online Food Order Management System with Recommendation Integrated ASP.NET and Microsoft SQL Server
IEEE Xplorer

Projects

GI TRACT Image-segmentation using Deep Learning

GI Tract Image Segmentation, advanced models like EfficientUNet, DeepLabV3+, and Mask R-CNN are employed to achieve high-precision segmentation of organs such as the stomach, small bowel, and large bowel. These architectures enhance feature extraction and boundary detection, improving both accuracy and robustness in medical image analysis.

Predictive Maintenance of Smart Manufacturing Systems using Deep Learning:

Project focuses on forecasting equipment failures before they occur by analyzing sensor and machine data. Models like LSTM, CNN, and autoencoders are used to detect anomalies and predict remaining useful life (RUL), ensuring reduced downtime and optimized maintenance.

Cyberbullying detection using machine learning and Reinforcement Learning

Cyberbullying detection using multiclass classification in machine learning involves creating algorithms to identify and categorize harmful behaviors like harassment and threats by analyzing social media text with natural language processing (NLP). Utilizing Q Learning and SARSA algorithms, the system can learn and adapt to various patterns of cyberbullying for more accurately.

Certifications

Python for data science, AI and Development by IBM

Coursera

March 2024

Business Intelligence using Power BI (Workshop)

SkillNation

May 2024
